## 1-1 Safety Precautions

1) Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:

(1) Be sure that no built-in protective devices are defective or have been defeated during servicing.

(1) Protective shields are provided to protect both the technician and the customer. Correctly replace all missing protective shields, including any remove for servicing convenience.

(2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fish papers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning.

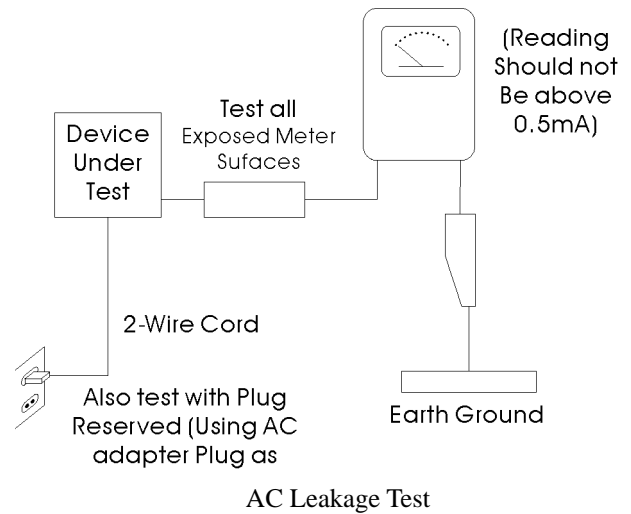

(2) Be sure that there are no cabinet opening through which adults or children might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, excessively wide cabinet ventilation slots, and an improperly fitted and/or incorrectly secured cabinet back cover.

(3) Leakage Current Hot Check-With the instrument completely reassembled, plug the AC line cord directly into a 120V AC outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards institute (ANSI) C101.1 Leakage.

Current for Appliances and underwriters Laboratories (UL) 1270 (40.7). With the instrument's AC switch first in the ON position and then in the OFF position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinets, screwheads, metallic overlays, control shafts, etc.), especially and exposed metal parts that offer an electrical return path to the chassis.

Any current measured must not exceed 0.5mA.

Reverse the instrument power cord plug in the outlet and repeat the test.

Any measurements not within the limits specified herein indicate a potential shock hazard that must be eliminated before returning the instrument to the customer.

(4) Insulation Resistance Test Cold Check-(1) Unplug the power supply cord and connect a jumper wire between the two prongs of the plug. (2) Turn on the power switch of the instrument. (3) Measure the resistance with an ohmmeter between the jumpered AC plug and all exposed metallic cabinet parts on the instrument, such as screwheads, antenna, control shafts, handle brackets, etc. When an exposed metallic part has a return path to the chassis, the reading should be between 1 and 5.2 megohm. When there is no return path to the chassis, the reading must be infinite. If the reading is not within the limits specified, there is the possibility of a shock hazard, and the instrument must be re-pared and rechecked before it is returned to the customer.

2) Read and comply with all caution and safety related

notes non or inside the cabinet, or on the chassis.

- 3) Design Alteration Warning-Do not alter or add to the mechanical or electrical design of this instrument. Design alterations and additions, including but not limited to, circuit modifications and the addition of items such as auxiliary audio output connections, might alter the safety characteristics of this instrument and create a hazard to the user. Any design alterations or additions will make you, the service, responsible for personal injury or property damage resulting there from.
- 4) Observe original lead dress. Take extra care to assure correct lead dress in the following areas:
  - (1) near sharp edges, (2) near thermally hot parts (be sure that leads and components do not touch thermally hot parts), (3) the AC supply, (4) high voltage, and (5) antenna wiring. Always inspect in all areas for pinched, out-of-place, or frayed wiring. Do not change spacing between a component and the printed-circuit board, Check the AC power cord for damage.

- 5) Components, parts, and/or wiring that appear to have overheated or that are otherwise damaged should be replaced with components, parts and/or wiring that meet original specifications. Additionally determine the cause of overheating and/or damage and, if necessary, take corrective action to remove and potential safety hazard.
- 6) Product Safety Notice-Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by shading, an () or a () on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire and/or other hazards. Product safety is under review continuously and new instructions are issued whenever appropriate.

## 1-2 Servicing Precautions

**CAUTION:** Before servicing Instruments covered by this service manual and its supplements, read and follow the Safety Precautions section of this manual.

**Note:** If unforeseen circumstance create conflict between the following servicing precautions and any of the safety precautions, always follow the safety precautions. Remember; Safety First

### 1-2-1 General Servicing Precautions

- (1) a. Always unplug the instrument's AC power cord from the AC power source before (1) removing or reinstalling any component, circuit board, module or any other instrument assembly. (2) disconnecting any instrument electrical plug or other electrical connection. (3) connecting a test substitute in parallel with an electrolytic capacitor in the instrument.
- b. Do not defeat any plug/socket B+ voltage interlocks with which instruments covered by this service manual might be equipped.
- c. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.

- d. Always connect a test instrument's ground lead to the instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.

**Note:** Refer to the Safety Precautions section ground lead last.

- (2) The service precautions are indicated or printed on the cabinet, chassis or components. When servicing, follow the printed or indicated service precautions and service materials.
- (3) The components used in the unit have a specified flame resistance and dielectric strength. When replacing components, use components which have the same ratings, by () or by () in the circuit diagram are important for safety or for the characteristics of the unit. Always replace them with the exact replacement components.
- (4) An insulation tube or tape is sometimes used and some components are raised above the printed wiring board for safety. The internal wiring is sometimes clamped to prevent contact with heating components. Install such elements as they were.
- (5) After servicing, always check that the removed screws, components, and wiring have been installed correctly

and that the portion around the serviced part has not been damaged and so on. Further, check the insulation between the blades of the attachment plug and accessible conductive parts.

### 1-2-2 Insulation Checking Procedure

Disconnect the attachment plug from the AC outlet and turn the power ON. Connect the insulation resistance meter

(500V) to the blades of the attachment plug. The insulation resistance between each blade of the attachment plug and accessible conductive parts (see note) should be more than 1 Megohm.

**Note:** Accessible conductive parts include metal panels, input terminals, earphone jacks, etc.

### 1-3 ESD Precautions

#### Electrostatically Sensitive Devices (ESD)

Some semiconductor (solid static electricity) devices can be damaged easily by static electricity.

Such components commonly are called Electrostatically Sensitive Devices (ESD). Examples of typical ESD devices are integrated circuits and some field-effect transistors and semiconductor chip components. The following techniques of component damage caused by static electricity.

- (1) immediately before handling any semiconductor components or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- (2) after removing an electrical assembly equipped with ESD devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- (3) Use only a grounded-tip soldering iron to solder or unsolder ESD device.
- (4) Use only an anti-static solder removal devices. Some

solder removal devices not classified as “anti-static” can generate electrical charges sufficient to damage ESD devices.

- (5) Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ESD devices.
- (6) Do not remove a replacement ESD device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive materials).
- (7) Immediately before removing the protective materials from the leads of a replacement ES device touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

- (8) Minimize bodily motions when handling unpackaged replacement ESD devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ESD device).

## 2-1-2 NTSC/PAL Digital Video Encoder (CS4955)

### FEATURES

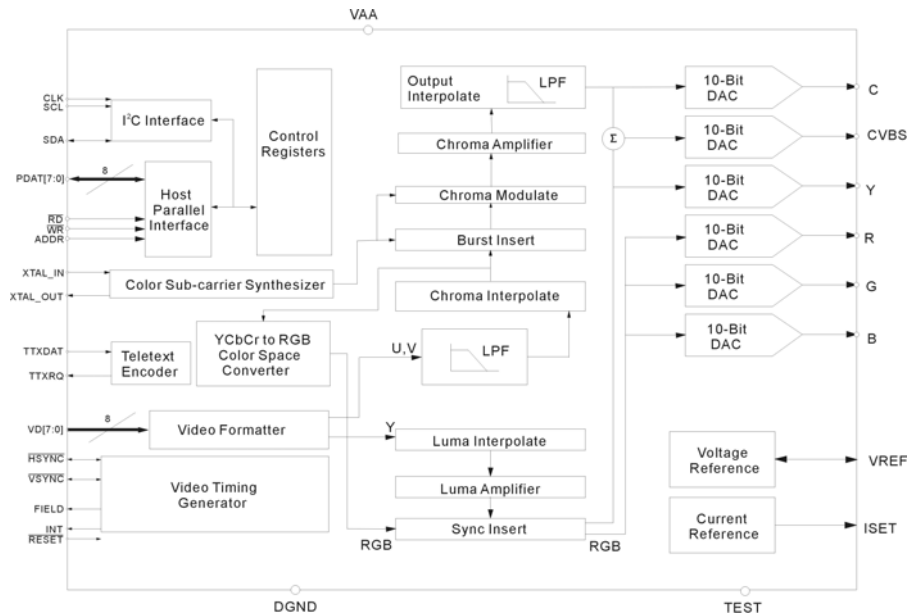

- Six DACs providing simultaneous composite, S-video, and RGB or Component YUV outputs
- Programmable DAC output currents for low impedance(37.5Ω) and high impedance(150Ω)loads.
- Multi-standard support for NTSC-M, NTSC-JAPAN, PAL (B, D, G, H, I, M, N, Combination N)
- ITU R.BT656 input mode supporting EAV/SAV codes and CCIR601 Master/Slave input modes
- Programmable HSYNC and VSYNC timing
- Multistandard Teletext(Europe, NABTS, WST)

support

- VBI encoding support
- Wide-Screen Signaling (WSS) support, EIA-JCPX1204)
- NTSC closed caption encoder with interrupt
- CS4955 supports Macrovision copy protection Version 7
- Host interface configurable for parallel or I<sup>2</sup>C compatible operation
- On-chip voltage reference generator
- +.3.3V or +5V operation, CMOS, low-power modes, tri-state DACs

### Ordering Information

CS4955-CQ      48-pin TQFP

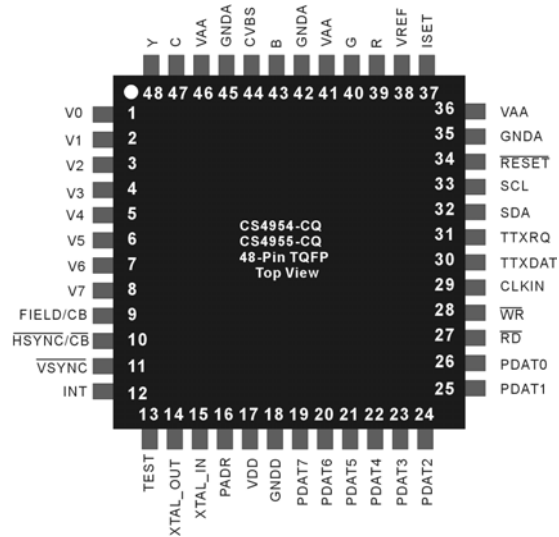

### DESCRIPTION

The CS4955 provides full conversion from digital video formats YcbCr or YUV into NTSC and PAL Composite, Y/C (S-video) and RGB, or YUV analog video. Input formats can be 27MHz 8-bit YUV, 8-bit YcbCr, or ITUR.BT656 with support for EAV/SAV codes. Video output can be formatted to be compatible with NTSC-M, NTSC-J, PAL-B, D, G, H, I, M, N, and Combination N systems. Closed Caption is supported in NTSC. Teletext is supported for NTSC and PAL.

Six 10-bit DACs provide two channels for an S-Video output port, one or two composite video outputs, and three RGB or YUV outputs. Two-times oversampling reduces the output filter requirements and guarantees no DAC-related modulation components within the specified bandwidth of any of the supported video standards.

Parallel or high-speed I<sup>2</sup>C compatible control interfaces are provided for flexibility in system design. The parallel interface doubles as a general purpose I/O port when the CS4954 is in I<sup>2</sup>C mode to help conserve valuable board area.

## 2-1-3 DVD Processor Chip (MTK1369AE)

### \* Features

- Single-chip DVD video decoder in a 208-pin PQFP package
- Supports MPEG-1 system and MPEG-2 program streams
- Programmable multimedia processor architecture
- Compatible with Audio CD, Video CD, VCD 3.0, and Super Video CD (SVCD)
- DVD Navigation 1
- Built-in content Scrambling System (CSS)

#### - Audio

- Built-in Karaoke key-shift function
- DolbyTM Digital 2-channel down mix audio output for DolbyTM
- Dolby Pro Logic
- Linear PCM streams for 24 bit / 96KHz
- Concurrent S/PDIF out and 2-channel audio output
- Sensaura Dolby Digital Virtual Surround
- DTS Digital Surround 2-channel down mix stereo output
- S/PDIF output for encoded AC-3, DTS Digital output or Linear PCM

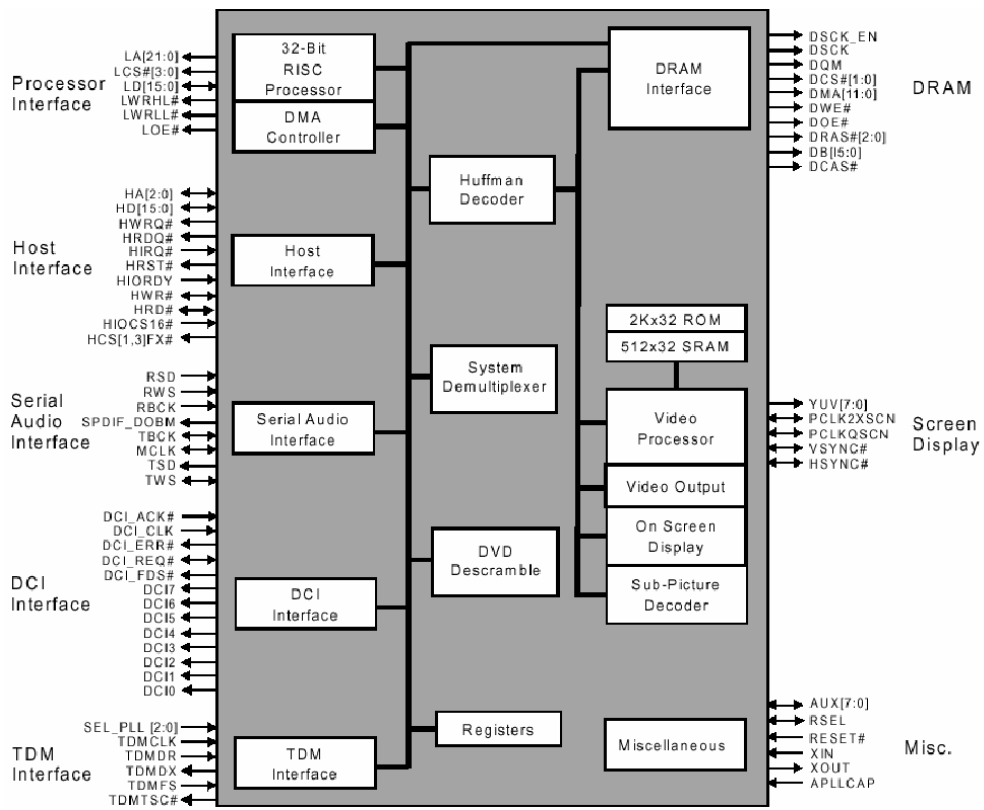

#### - Peripheral

- Glueless interface to DVD loaders (ATAPI or A/V bus I/F)
- Bi-directional 12C audio interface
- 8 general-purpose auxiliary ports
- Single 27MHz clock input

#### - Smart Technology

- SmartZoomTM for motion zoom & pan
- SmartZoomTM for NTSC to PAL conversion and vice versa
- SmartZoomTM for video error concealment

## MT1336

### GENERAL DESCRIPTION

MT1336 is a high performance CMOS analog front-end IC for both CD\_ROM driver up to 48xs and DVD-ROM driver up to 16xs. It also supports DVD-RAM read up to 4xs Version 2. It contains servo amplifiers to generate focusing error, 3-beam tracking error, 1 beam radial push-pull signal, RF level and SBAD for servo functions. It also includes DPD tracking error signal for DVD\_ROM application. For DVD-RAM disks, there are also Differential Push-Pull (DPP) method for generating tracking signal and Differential Astigmatic Detection (DAD) for processing focusing signal. Programmable equalizer and AGC circuits are also incorporated in this chip to optimize read channel performance. In addition, this chip has dual automatic laser power control circuits for DVD-ROM (DVD-RAM) and CD-ROM separately and reference voltage generators to reduce external components. Programmable functions are implemented by the access of internal register through bi-directional serial port to configure modes selection.

### FEATURES

- . RF equalizer with programmable  $f_c$  from 3MHz to 70MHz and programmable boost from 3db to 13db.
- . MT1336 supports at least eight different kinds of pick-up heads with versatile input configuration for both RF input stages and servo signal blocks.

- . Versatile on-line AGC.
- . 3 beams tracking error signal generator for CD\_ROM application.
- . One beam differential phase tracking error (DPD) generator for DVD\_ROM application.
- . Differential push pull tracking error (DPP) generator for DVD\_RAM application.
- . Focusing error signal generator for CD-ROM, DVD-ROM and DVD-RAM (DAD method).
- . RF level signal generator.
- . Sub-beam added signal for 3 beams CD\_ROM.
- . One beam push-pull signal generator for central servo application.
- . High speed RF envelop detection circuit with bandwidth up to 400KHz for CD-ROM.
- . Defect and Blank detection circuits
- . Dual automatic laser power control circuits with programmable level of LD monitor voltage.
- . Vref=1.4V voltage and V2ref=2.8V voltage generators.
- . V20=2.0V voltage for pick-up head reference.
- . Bi-directional serial port to access internal registers.
- . 128-pin LQFP

### 2-1-4 20-Pin, 24-Bit, 96kHz Stereo D/A with Volume Control (WM8720)

#### Features

- ◆ Performance:
  - 102dB SNR ('A' weighted @48kHz),
- ◆ -THD: -95dB @ 0dB FS
- ◆ 5V or 3.3V supply operation
- ◆ Sampling frequency: 8kHz to 96kHz

- ◆ Input data word: 16 to 24-bit
- ◆ Hardware or SPI compatible serial port control modes:
  - Hardware mode:system clock, reset, mute, de-emphasis
  - Serial control mode: mute, de-emphasis, digital attenuation(256 steps), zero mute, phase reversal, power down
- ◆ Compatible with PCM1720

### **Description**

The WM820 is a high performance stereo DAC designed for audio applications such as CD, DVD, home theatre systems, set top boxes and digital TV. The WM8720 supports data input word lengths from 16 to 24-bits and sampling rates up to 96kHz. The WM8720 consists of a serial interface port, digital interpolation filter, multi-bit sigma delta modulator and stereo DAC in a small 20-pin SSOP package. The WM8720 also includes a digitally controllable mute and attenuator function on each channel.

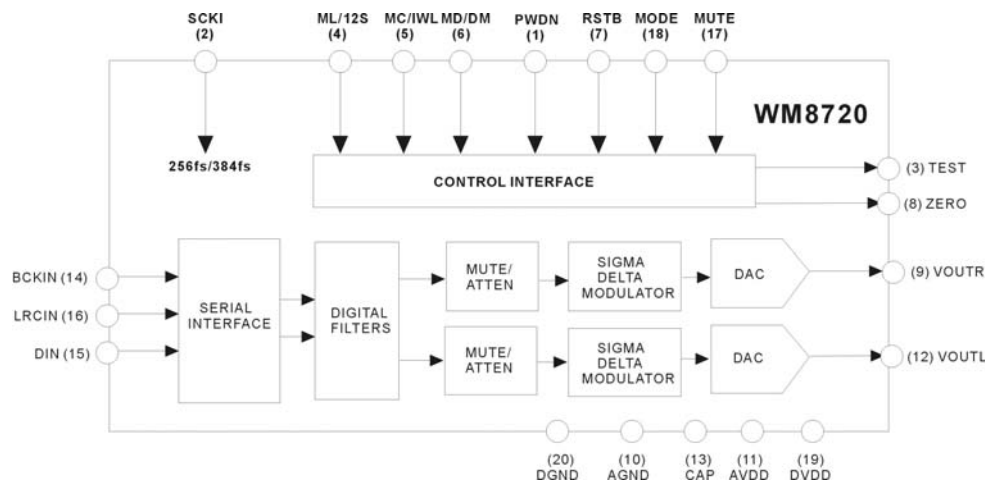

The WM8720 supports a variety of connection schemes for audio DAC control. The SPI-compatible serial control port provides access to a wide range of features including on-chip mute, attenuation and phase reversal. A hardware controlllable interface is also available.

The programmable data input port supports a variety of glueless interfaces to popular DSPs, audio decoders and S/PDIF and AES/EBU receivers.

### **APPLICATIONS**

- . CD, DVD audio
- . Home theare systems
- . Set top boxes
- . Digital TV

## PIN DESCRIPTIONS

PIN	NAME	TYPE	DESCRIPTION
1	PWDN	Digital input	Powerdown control; low is ON, high is POWER OFF, Internal pull-down.
2	SCKI	Digital input	System clock input(256 or 384fs).
3	TEST	Digital output	Reserved.
4	ML/I2S	Digital input	Latch enable (software mode) or input format selection (hardware mode) Internal pull-up.
5	MC/IWL	Digital input	Serial control data clock input (software mode) or input word length selection (hardware mode). Internal pull-up.
6	MD/DM	Digital input	Serial control data input (software mode) or de-emphasis selection (hardware mode). Internal pull-up.
7	RSTB	Digital input	Reset input-active low. Internal pull-up.
8	ZERO	Digital output	Infinite zero detect-active low. Open drain type output with active pull-down.
9	VOUTR	Analogue output	Right channel DAC output.
10	AGND	Supply	Analogue ground supply.
11	AVDD	Supply	Analogue positive supply.
12	VOUTL	Analogue output	Left channel DAC output.
13	CAP	Analogue output	Analogue internal reference.
14	BCKIN	Digital input	Audio data bit
15	DIN	Digital input	Serial audio data input.
16	LRCIN	Digital input	Sample rate clock input.
17	MUTE	Digital IO	Mute control pin, input or automute output. Low is not mute, high is mute, Z is automute.
18	MODE	Digital input	Mode select pin. Low is software mode, high is hardware control. Internal pull-down.
19	DVDD	Supply	Digital positive supply.
20	DGND	Supply	Digital ground supply.

Note:

Digital input pins have Schmitt trigger input buffers.

## 2-1-5 Serial EEPROM, 2K (256 x 8) (24C16)

### \* Features

- Low-Voltage and Standard-Voltage Operation
  - 5.0 (V<sub>CC</sub> = 4.5V to 5.5V)
  - 2.7 (V<sub>CC</sub> = 2.7V to 5.5V)
  - 2.5 (V<sub>CC</sub> = 2.5V to 5.5V)
  - 1.8 (V<sub>CC</sub> = 1.8V to 5.5V)
- Internally Organized 128 x 8 (1K), 256 x 8 (2K), 512 x 8 (4K), 1024 x 8 (8K) or 2048 x 8 (16K)
- 2-Wire Serial Interface
- Schmitt Trigger, Filtered Inputs for Noise Suppression
- Bi-directional Data Transfer Protocol
- 100 kHz (1.8v, 2.5V, 2.7V) and 400 kHz (5V) Compatibility
- Write Protect Pin for Hardware Data Protection
- 8-Byte Page (1K, 2K), 16-Byte Page (4K, 8K, 16K) Write Modes
- Partial Page Writes Are Allowed
- Self-Timed Write Cycle (10 ms max)
- High Reliability
  - Endurance: 1 Million Write Cycles
  - Data Retention: 100 Years
  - ESD Protection: >3000V
- Automotive Grade and Extended Temperature Devices Available
- 8-Pin and 14-Pin JEDEC SOIC, 8-Pin PDIP, 8-Pin MSOP, and 8-Pin TSSOP Packages

## 2-1-6 8M-BIT [1Mx8/512Kx16] CMOS FLASH MEMORY

### FEATURES

- 1,048,576 x 8/524,288 x 16 switchable
- Single power supply operation
  - 5.0V only operation for read, erase and program

## operation

- Fast access time: 70/90/120ns
- Low power consumption
  - 50mA maximum active current
  - 0.2uA typical standby current
- Command register architecture
  - Byte/word Programming (7us/12us typical)
  - Sector Erase (Sector structure 16K-Bytex1, 8K-Bytex2, 32K-Bytex1, and 64K-Byte x15)
- Auto Erase (chip & sector) and Auto Program
  - Automatically erase any combination of sectors with
- **Erase Suspend capability.**
  - Automatically program and verify data at specified **address**
- Erase suspend/Erase Resume
  - Suspends sector erase operation to read data from, or program data to, another sector that is not being erased, then resumes the erase.
- **Status Reply**
  - Data polling & Toggle bit for detection of program and erase operation completion.
  - Ready/Busy pin (RY/BY)
    - Provides a hardware method of detecting program or erase operation completion.
  - Sector protection
    - Sector protect/chip unprotect for 5V/12V system.
    - Hardware method to disable any combination of sectors from program or erase operations
    - Temporary sector unprotect allows code changes in previously locked sectors.
  - 100,000 minimum erase/program cycles
  - Latch-up protected to 100mA from -1V to VCC+1V
  - Boot Code Sector Architecture
    - T = Top Boot Sector
    - B = Bottom Boot Sector
  - Low VCC write inhibit is equal to or less than 3.2V
  - Package type:
    - 44-pin SOP
    - 48-pin TSOP
  - Compatibility with JEDEC standard
    - Pinout and software compatible with single-power supply Flash

## 48 TSOP (Standard Type) (12mm x 20mm)

### 2-1-7 512K X 16 Bit X 2 Banks Synchronous DRAM (A43L0616)

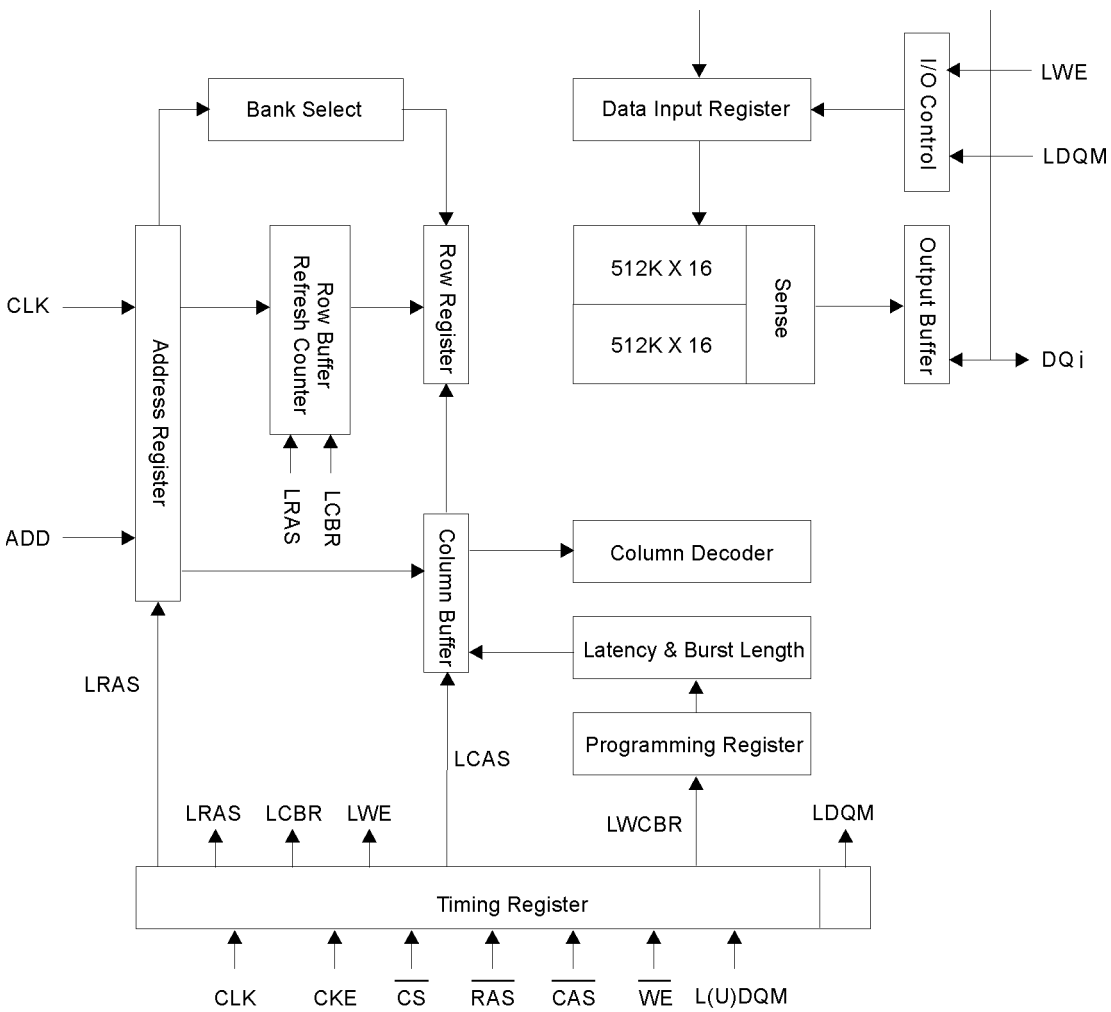

#### Features

- JEDEC standard 3.3V power supply
- LVTTL compatible with multiplexed address
- Dual banks / Pulse RAS
- MRS cycle with address key programs
  - CAS Latency (2,3)
  - Burst Length (1,2,4,8 & full page)
  - Burst Type (Sequential & interleave)
- All inputs are sampled at the positive going edge of the system clock
- Burst Read Single-bit Write operation
- DQM for masking
- Auto & self refresh
- 64ms refresh period (4K cycle)
- 50 Pin TSOP (II)

## Pin Descriptions

Symbol	Name	Description
CLK	System Clock	Active on the positive going edge to sample all inputs
CS	Chip Select	Disables or Enables device operation by masking or enabling all inputs except CLK, CKE and L(U)DQM
CKE	Clock Enable	Masks system clock to freeze operation from the next clock cycle. CKE should be enabled at least one clock + tss prior to new command. Disable input buffers for power down in standby.
A0~A10/AP	Address	Row/Column addresses are multiplexed on the same pins. Row address: RA0 ~ RA10, Column address: CA0 ~ CA7
BA	Bank Select Address	Selects bank to be activated during row address latch time. Selects band for read/write during column address latch time.
RAS	Row address Strobe	Latches row addresses on the positive going edge of the CLK with RAS low. Enables row access & precharge.
CAS	Column Address Strobe	Latches column addresses on the positive going edge of the CLK with CAS low. Enables column access.
WE	Write Enable	Enables write operation and Row precharge.

Symbol	Name	Description
L(U)DQM	Data Input/Output Mask	Makes data output Hi-Z, t SHZ after the clock and masks the output. Blocks data input when L(U)DQM active.
DW0-15	Data Input/Output	Data inputs/outputs are multiplexed on the same pins.
VDD/VSS	Power Supply/Ground	Power Supply: +3.3V±0.3V/Ground
VDDQ/VSSQ	Data Output Power/Ground	Provide isolated Power/Ground to DQs for improved noise immunity.
NC/RFU	No Connection

## 6. Troubleshooting

No power	Insert the AC power plug securely into the power outlet.
No picture	Make sure that the equipment is connected properly. Make sure that the input setting for TV is Video (AV).
No sound	Make sure that the equipment is connected properly.
Distorted sound	Make sure that the input settings for the TV and stereo system are correct.
No fast forward or fast reverse	Some discs may have sections that prohibit fast forward or fast reverse.
No proper aspect ratio	Select the correct setup for TV aspect ratio that matches your TV set.
No operations can be performed with the remote controller	Check the batteries are installed with the correct polarities. Point the remote control unit at the remote control sensor and operate. Remove the obstacles between the remote control unit and remote control sensor.
No button operation	Set the POWER button to OFF and then back to ON. Alternatively, turn off the power, disconnect the power plug and then reconnect it.
Audio soundtrack and/or Subtitle language is not the one you selected.	If the audio soundtrack and /or subtitle language does not exist on the disc, the language selected at the initial settings will not be seen.
No Angle change	This function is dependent on software availability. Even if a disc has a number of angles recorded, these angles may be recorded for specific scenes only.

No.	Name	Counts	Blueprint No.	Material No.	Notes
1	trademark	1			
2	MODELL :DDV2140(DDV2141. DVD6722M.DVD5000.DVD412 .fl d402)panel	1	CO-01		silk-screen file No.:
3	CO-01 power-supply button	1	CO-01		silver
4	CO-01 knob	2	CO-01		silver
5	number button	1	CO-01		silver
6	fast forward button	1	CO-01		silver
7	pause button	2	CO-01		silver
8	load/unload button	1	CO-01		silver
9	light-transporting canister	1	CO-01		
10	CO-01 VFD screen lens	1	CO-01XSJ		silk-screen blueprint No.:
12	subassembly of CO-DCBC0-01 control panel	1			
13	Subassembly of CO-DHACO-02 earphone board	1			
14	plain-headed triangular nail BB3*8 colorful zinc	16			control panel:9, bracket for cover: 4, microphone board:1, power-supply switch: 2
15	ordinary green round-headed LED	1			diameter: 3mm round-headed

### The components design list for **control panel(CO-DCBCO-01)**

No.	Name/Specification	Counts	Position in the paper	Material No.	Notes
resistor					
1	resistor 10E 1/4W 10%	2	R1,R9		
2	resistor 220E 1/4W 10%	2	R11,R12		
3	resistor 10K 1/4W 10%	7	R7,R6,R3,R2,R4,R8,R10		
4	resistor 56K 1/4W 10%	1	R5		
porcelain capacitor					
5	porcelain capacitor 104 50V	1	C3		diameter: 5mm
electrolyzed capacitor					
6	electrolyzed capacitor 47 uF 16V	1	C1,C2		diameter:5mm
Diode					
7	diode IN4148	4	D1~D4		
IC					
8	16312(AD16312)	1	U1

11	VFD screen	1	IC2		BJ732GNK
12	left bracket of screen	1			
13	right bracket of screen	1			
14	control panel	1	CO—DCBCO-01		2001-3-18
15	touching-softly switch	12	K1~K12		6*6*5
16	remote control receiver	1			TD138
17	power switch	1			TV-5□KDC-A10-1D□8A/128A AC250V
18	2.54connector 4P without-terminator red-white row-wire 230mm	1	CN2		from control board to power-supply board
19	2.54 connector 6P red-white row-wire 220mm	1	CN1		from control board to decoding board
20	3.96connector 2P no-terminator 150 red both-insulated	1			from switch board to power-supply board
21	iron thread 8mm	3	J2,J3, JMP2		diameter: 0.6mm

No.	Name/Specification	Counts	Position in the paper	Material No.	Notes
22	iron thread 10mm	2	J1,J5		diameter: 0.6mm
23	iron thread 12mm	1	JMP1		diameter: 0.6mm
